The novelty of this work is the proposal of a combined methodology to find the potential to feed urban transport with urban solar power in cities, close to the equatorial line.

H2 from renewable electricity can be stored and used directly or through fuel cells. This study aims to determine the H2 capability that ...

To harness the solar radiation available in Cuenca, a study was conducted in the central downtown area, demonstrating that by ...

This study evaluates a solar-powered electric mobility pilot implemented at the University of Cuenca (Ecuador), combining two ...

At the same time, the bus station is equipped with various high-tech facilities, with real-time vehicle arrival forecast, LCD touch electronic screen, wireless WIFI and other functions to ...

Open-air low-speed electric shuttle sightseeing buses equipped with a solar panel-covered roof are produced in series and are commercially available. According to the producers, solar ...

Passengers can see when their bus is coming and any schedule changes to avoid long wait times and confusion. Our bus shelters also feature USB charging ports that allow passengers to ...

H2 from renewable electricity can be stored and used directly or through fuel cells. This study aims to determine the H2 capability that could be achieved when integrating large ...

(Ecuador), combining two electric vans with daytime charging from a 35 ...

To harness the solar radiation available in Cuenca, a study was conducted in the central downtown area, demonstrating that by installing PV solar panels on rooftops, the ...

The electric trolleybuses will help to reduce air pollution and greenhouse gas emissions from the public transportation network and improve urban mobility in the capital - all ...

Passengers can see when their bus is coming and any schedule changes to avoid long wait times and confusion. Our bus shelters also feature USB ...

List of Ecuadorian solar panel installers - showing companies in Ecuador that undertake solar panel installation, including rooftop and standalone solar systems.

The distinction between a solar-only electric bus and an electro-solar bus is fluid, as the distinction depends on the actual usage: whether the bus is recharged from solar or other power sources. Solar-only bus services involve recharging the bus from solar energy, usually from solar panel-covered bus station canopies. The concept is similar to that of solar parking plot for cars and bicycles, where vehicles can re-charge while parked. The need for recharging poses constraint...
