-----

Yes, solar-powered irrigation systems for your farmland are effective in a lot of ways, like reducing the dependency on fossil fuels, decreasing operational costs and ...

By integrating irrigation equipment, control systems, and energy storage, this unit provides an efficient and cost-effective alternative to traditional irrigation stations.

In Ethiopia and Kenya, solar technologies are being integrated across the agricultural value chain, including irrigation and cold storage, with region-specific plans to expand adoption and ...

In 2017, Central and Southern Asia and Northern Africa registered very high water stress of over 70%, followed by Western Asia and Eastern Asia with ...

Against the background of increasing water scarcity and the corresponding expansion of measures to support the introduction of efficient irrigation technologies in 2023-2024, Central ...

Solar irrigation pumps (SIP) ensure reliable, non-pollutant and cost-effective irrigation, especially in regions with high groundwater reliance and ample solar irradiance, like ...

a mounting structure for PV panels, fixed or equipped with a solar tracking system to maximize the solar energy yield, a pump controller, a surface or submersible water pump (usually ...

In 2017, Central and Southern Asia and Northern Africa registered very high water stress of over 70%, followed by Western Asia and Eastern Asia with high water stress of 54% and 46%, ...

dependency on fossil fuels, ...

Modernizing Central Asia's irrigation is key to realizing these goals. It applies technical, institutional and managerial upgrading of irrigation schemes to improve the efficient use of ...

In Ethiopia and Kenya, solar technologies are being integrated across the agricultural value chain, including irrigation and cold storage, with region ...

irrigation methods, such as furrow watering, remain prevalent in agricultural settings despite their inherent inefficiencies. This approach leads to significant wastage of both water resources and ...

The initiative has three components: (1) stocktaking of current irrigation development in Central Asia, (2) sharing information to pave the way to irrigation modernization, and (3) providing ...
