How does electricity work in Cyprus?

Electricity in Cyprus is managed by the Electricity Authority of Cyprus. Power is primarily generated at three fuel oil-burning stations but the use of distributed renewable energy is expanding. About 97% of the primary energy use was imported in 2008.

How many energy storage applications have been approved in Cyprus?

The Cyprus Energy Regulatory Authority (CERA) representatives reported establishing a regulatory framework for energy storage in 2019, followed by market rules approval in 2021. The Cyprus Transmission System Operator has received 13 storage applications totaling 224 megawatts capacity, with eight applications processed and five under review.

How many photovoltaic systems are there in Cyprus?

The number of photovoltaic systems in Cyprus rose by 66% in the year to July 2023, to over 45,000, with a capacity of 256 MW, the systems being used by each customer, including commercial, to reduce their electricity bill through an agreement of net-metering.

Why does Cyprus waste so much energy?

AKEL MP Costas Costa characterised Cyprus as "the only country in the world where thousands of megawatt-hours go unused due to lack of centralised green energy storage systems," adding: "During the day we waste megawatt-hours because we lack storage, and at night we are one step away from blackouts."

Currently, power in Northern Cyprus is primarily generated at three main fuel oil-burning stations: Teknecik, Dikmen, and Kalecik, with a total capacity of 346.3 MW.

This paper reports sizing of a photovoltaic (PV) power plant with storage system for Middle East Technical University Northern Cyprus Campus through technical and economic analyses.
