Is Russia launching a 4G & 5G base station?

Russia is starting the production of 4G and 5G base stations that will use Russian-made software. This was announced on October 1 by Russian Prime Minister Mikhail Mishustin. We are now launching the creation of base stations with Russian software for 4G and 5G networks. Next year, we plan to establish mass production of such solutions.

Will Ericsson build a 5G base station in Russia?

In December 2021, *Kommersant*, citing its sources, wrote that Ericsson is preparing for the process of localizing the production of 5G base stations in the Russian Federation. According to the publication, the Swedish company is considering options for partnership or creating its own site for the production of equipment.

When will 5G start in Russia?

"The active deployment of 5G networks at domestic base stations will begin in 2026 in large Russian cities," the minister said, noting that preparatory work to launch the networks will take place in 2025.

How many base stations are there in Russia?

According to *Vedomosti*, by the end of November 2020, there are about 90 thousand base stations in the Russian capital, and with the launch of 5G networks, the number of such equipment will at least triple.
