What are battery storage system tax credits?

Among the many provisions of the IRA, the introduction of battery storage system tax credits stands out as a major incentive for individuals and businesses looking to invest in energy storage solutions. These battery storage system tax credits aim to accelerate the adoption of energy storage technologies.

Does battery storage qualify for IRA tax credit?

Yes, standalone battery storage now qualifies for the 30% Residential Clean Energy Credit, introduced in 2023 under the IRA. This significant change means homeowners can receive a 30% tax credit for the installation of battery storage systems, even if they are not paired with new solar panels.

Do home batteries qualify for tax credits?

Now, home batteries will only qualify for the 30% tax credit if they're purchased and installed by the end of the year before the credit phases out entirely. There is a bright spot: residential systems leased from third parties will remain eligible for tax credits beyond 2025, as they rely on 48E instead of 25D.

Do lithium batteries qualify for tax credits?

Yes, lithium batteries do qualify for the tax credit under the Inflation Reduction Act (IRA), with the potential for additional federal tax incentives for battery storage systems that can increase the credit up to 40%.

Given the current state of battery cell production in the United States, battery energy storage has largely been locked out of a financeable position on qualifying for the ...
