Can a biomass-based power plant be a reliable electrification option in Tehran?

Tehran is one of the most populous and polluted cities in Iran with a fossil fuel-dependent economy. This paper aims to assess a techno-economic and environmental feasibility of biomass-based power plant in off-grid mode to present optimal planning for reliable electrification to Tehran.

Can Tehran generate electricity using solar panels?

Data exhibit that Tehran city has good sunlight potential and can efficiently generate electricity using solar panels. The wind is another type of renewable energy resource, which can generate power via wind turbines that can extract electrical power from the kinetic energy of wind flow.

Can mobile energy storage improve power grid resilience?

As mobile energy storage is often coupled with mobile emergency generators or electric buses, those technologies are also considered in the review. Allocation of these resources for power grid resilience enhancement requires modeling of both the transportation system constraints and the power grid operational constraints.

Does power Edison have a mobile energy storage system?

Power Edison has deployed mobile energy storage systems for over five years, offering utility-scale plug-and-play solutions. In 2021, Nomad Trans-portable Power Systems released three commercially available MESS units with energy capacities ranging from 660 kWh to 2 MWh.

Aim: This study aimed to design and validate a grid-connected photovoltaic (PV) system to assess its potential for reducing CO<sub>2</sub> emissions and enhancing urban sustainability ...

Abstract: Optimum design for microgrids that include renewable energy sources (RESs) is a complex process

that requires optimization across a wide range of factors, including ...

Transitioning to low-carbon energy systems is crucial for sustainable development, particularly in oil-rich developing countries (ORDCs) that face intertwined economic and environmental ...

These aspects are discussed, along with a discussion on the cost-benefit analysis of mobile energy resources. The paper concludes by presenting research gaps, associated challenges, ...

This paper conducts a joint life-cycle costing and life-cycle assessment to address the cradle-to-gate energy, cost, and midpoint/endpoint environmental impacts of Tehran's ...

This paper aims to assess a techno-economic and environmental feasibility of biomass-based power plant in off-grid mode to present optimal planning for reliable electrification to Tehran.

Tehran is one of the most populous and polluted cities in Iran with a fossil fuel-dependent economy. This paper aims to assess a techno-economic and environmental ...

Oct 1, 2023 &#183; This paper conducts a joint life- cycle costing and life-cycle assessment to address the cradle-to-gate energy, cost, and midpoint/endpoint environmental impacts of Tehran's ...

Oct 30, 2023 &#183; In this paper, a power management technique is proposed for the solar-powered grid-integrated charging station with hybrid energy storage systems for charging electric

This article presents a comprehensive techno-economic analysis of integrating multisource renewable energy systems--solar panels, wind turbines, and flexible energy ...
