Energy in Burkina Faso is sourced primarily from diesel and heavy fuel, with some access to hydropower and solar. Burkina Faso produced 69 kilotonne of oil equivalent (ktoe) of energy in 2015, 89.8% of which was generated from fossil fuels. Final consumption of electricity was 86 ktoe. The country uses energy from biomass, fossil fuels, hydroelectricity, and solar.

The Government of Burkina Faso has signed a Public-Private Partnership (PPP) agreement with a local developer and a Dutch clean energy investment firm to develop a ...

The energy sector in Burkina Faso is characterized by a heavy reliance on traditional biomass, such as wood and charcoal, for cooking and heating. While these ...

Let's dive into the energy and services landscape in Burkina Faso! Understanding the current state, challenges, and opportunities in this sector is super crucial for anyone ...

Published January 2025, this map provides a detailed view of the power sector in Burkina Faso. The locations of power generation facilities that are operating, under ...

Energy production includes any fossil fuels drilled and mined, which can be burned to produce electricity or used as fuels, as well as energy produced by nuclear fission and renewable ...
