As you know, matlab deals mainly with matrices. So, the size function gives you the dimension of a matrix depending on how you use it. For example: 1. If you say `size(A)`, it will give you a ...

The approach basically builds on other work where people experimentally identified the size of primitives and typical Java objects and then apply that knowledge to a ...

The OP was asking "`Array.size ()` vs `Array.length`". From the previous discussions, it was make clear, that the "size" Function is not part of standard JavaScript but implemented ...

If the size of the int is that important one can use `int16_t`, `int32_t` and `int64_t` (need the `iostream` include for that if I remember correctly). What's nice about this that `int64_t` should not have ...

I'm trying to write a script that will calculate a directory size and if the size is less than 10GB, and greater then 2GB do some action. Where do I need to mention my folder name? # 10GB SIZE=&quot;

In several C++ examples I see a use of the type `size_t` where I would have used a simple `int`. What's the difference, and why `size_t` should be better?

In this case, depending upon what your use case is, you might be better off using `int` (or `long long`) for `s1` and `s2`. There are some functions in C/POSIX that could/should use `size_t`, but don't ...
