What are the different types of power plants in New Zealand?

Power plants in New Zealand have different generating roles - for baseload, intermediate or peaking. Baseload generators are those that run continuously (except for maintenance), and include all geothermal and run-of-the-river hydroelectric plants, which must 'use it or lose it'. Intermediate generators are load-following power plants.

Which portable power station should I buy?

The ideal portable power station to buy depends on which devices you plan to use and how long you will travel without access to a recharging point. Our 1526Wh power station offers triple the power capacity of the 555Wh model, making it the best choice for people continuously on the road or whose camping trips last longer than the weekend.

What is the wholesale market in New Zealand?

The wholesale market is where generators sell electricity and retailers buy electricity. Retailers then on-sell that electricity to businesses and households across New Zealand. There are about 80 generation companies, 62 retailers and 6 gentailers (generator-retailers) in New Zealand's wholesale market.

How many wholesale companies are there in New Zealand?

There are about 80 generation companies, 62 retailers and 6 gentailers (generator-retailers) in New Zealand's wholesale market. The remaining wholesale market participants comprise distribution and network companies and traders in secondary markets, such as financial hedges.
