US energy storage set a Q1 record in 2025 with 2 GW added, but looming policy changes could put that growth at serious risk.

According to the latest report, U.S. battery storage capacity increased by 10.3 GW last year and could reach a record high if the planned 18.2 GW of battery storage capacity ...

"Residential storage is expected to outpace solar due to stronger policy resilience, high attachment rates in key markets like ...

Solar and storage installations reach new highs for tech giants. In the United States, many corporations are making significant investments in solar and energy storage to ...

The U.S. solar and battery storage boom in 2025 is set to break records, with 63 GW of new capacity expected.

Despite policy headwinds earlier in the year, energy storage additions in China and the US are set to continue growing this decade. The removal of storage mandates in China for ...

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW ...

Despite these headwinds, solar and energy storage still accounted for 82% of all new power added to the U.S. grid during the administration's first six months. This outcome ...

"Residential storage is expected to outpace solar due to stronger policy resilience, high attachment rates in key
